Overview:

This example illustrates a simple retail store background music system with one (1) commercial media player and one (1) mixer amplifier powering five ceiling speakers and feeding a line level audio signal to the music-on-hold phone system input.

Application Example Description:

In this example, a commercial media player provides the music source for an AA35 70V amplifier. The amplifier powers five (5) FAP62T speakers mounted in a suspended tile ceiling with each tap setting at 4-watts. Using the rear panel dipswitches, select the zone-2 source to use channel 2 (music) and the output is then connected to the MOH (music-on-hold) phone system input and adjusted for clean sound.

Benefits:

- Cost Effective BGM with MOH
- Helps Provide Better Shopping Environment
